PROFESSIONAL SUMMARY

Third-year B.Sc. (Hons) Information Technology undergraduate specializing in Data Science at SLIIT, with hands-on experience in Python, SQL, R, Power BI, Excel, data warehousing, statistical analysis, data quality monitoring, and data visualization. Skilled in developing ETL workflows, automated validation systems, dashboards, reports, and analytical solutions to support data-driven decision-making. Seeking a Data Science Internship to apply analytical, programming, and problem-solving skills in real-world data projects.

EDUCATION

B.Sc. (Hons) in Information Technology, specializing in Data Science, SLIIT

- **Current CGPA:** 3.3 | Third-Year Undergraduate
- Expected Graduation: 2027

Relevant Coursework: Python Programming, Statistics, Machine Learning, Database Management, Data Warehousing, Business Intelligence, Data Visualization

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, R, Java, JavaScript, PHP, C++
- **Data Analysis:** Pandas, NumPy, Data Cleaning, Data Transformation, Exploratory Data Analysis (EDA), Feature Engineering, Data Profiling, Statistical Analysis
- **Data Visualization & BI:** Power BI, Matplotlib, Microsoft Excel, Dashboard Development
- **Databases:** MySQL, SQL Server, MongoDB
- **Data Engineering & BI Tools:** SSIS, SSAS, SSDT, OLAP, ETL, Data Warehousing, Dimensional Modeling
- **Version Control:** Git, GitHub
- **Tools:** Jupyter Notebook, VS Code, PyCharm, Postman, IntelliJ IDEA
- **Web Development:** React.js, Node.js, Express.js, Spring Boot, Tailwind CSS

PROJECTS

Oil Pipeline Accident & Loss Analytics Platform

Technologies: SQL Server, SSIS, SSAS, SSDT, Excel, Power BI, SQL

GitHub Data Warehouse: github.com/Charith-01/Oil-Pipeline-Accident-and-Loss-Analysis-Data-Warehouse

GitHub OLAP & Visualization: github.com/Charith-01/Oil-Pipeline-OLAP-and-Visualization

- Developed an end-to-end data warehousing and business intelligence solution to analyze oil pipeline accidents, financial losses, and operational trends.
- Designed ETL workflows using SSIS to extract, transform, and load structured data into a SQL Server data warehouse.

- Built dimensional models and OLAP cubes using SSAS and SSDT to support drill-down analysis and reporting.
- Created interactive Power BI dashboards and Excel reports to visualize accident patterns, loss trends, and operational insights.

Global AI & Data Science Job Market, Skills & Salary Trends Dashboard

Technologies: Python, Pandas, Matplotlib, Power BI, Git

GitHub: github.com/Charith-01/Global-AI-Data-Science-Skills-and-Salary-Trends

- Developed an end-to-end data analytics project analyzing 50,000+ AI & Data Science job postings.
- Performed data cleaning, exploratory data analysis (EDA), and feature engineering using Python and Pandas.
- Built an interactive Power BI dashboard to analyze job demand, salary trends, skills demand, and remote work insights.
- Created professional data visualizations using Matplotlib and prepared datasets for business intelligence reporting.

Data Quality Monitoring System

Technologies: Python, Pandas, Streamlit, Plotly, APScheduler, Pytest, SMTP

GitHub: github.com/Charith-01/Data-Quality-Monitoring-System

- Developed an automated data quality monitoring system for general and recruitment datasets, covering missing values, duplicates, invalid formats, required fields, and numeric-range violations.
- Built an interactive Streamlit dashboard with data profiling, health scoring, severity-based alerts, monitoring history, trend charts, and downloadable JSON and CSV reports.
- Implemented scheduled monitoring to identify and validate the latest incoming CSV file, generate reports, update alert logs, and send Gmail notifications for serious quality issues.
- Created a data governance framework, recruitment data dictionary, and automated Pytest test suite, achieving 8 passed tests with no failures.

Athlete Motivation and Performance Analysis using Statistical Modeling

Technologies: R, RStudio, Statistical Modeling, Regression Analysis

GitHub: github.com/Charith-01/Athlete-Motivation-and-Performance-Analysis-using-Statistical-Modelling

- Conducted a statistical analysis project using R to study the relationship between athlete motivation and performance.
- Performed data cleaning, exploratory data analysis, hypothesis testing, and regression Modeling.
- Evaluated model results and diagnostics to identify meaningful patterns and relationships in the dataset.
- Presented data-driven insights using statistical outputs and visualizations.
